FEATURES	BENEFITS
EDITS+ is highly customizable	Customize EDITS+ to match your coding procedures. Have your system administrator tailor EDITS+ to meet your needs by assigning custom names to the visit process windows, altering the order of windows, tailoring content of drop down lists, selecting rules to turn on and more.
Tools for Coding Quality	EDITS+ is designed with built-in tools to increase coding accuracy, resulting in claims being settled more quickly.
Rules	<p>Rules may be turned on in EDITS+ to check for compliance with requirements when visits are coded. Payer specific rules help ensure clean claims.</p> <p>Achieve greater coding consistency and overcome the loss of coder knowledge due to staff turnover, by using rules to establish and enforce coding and payer guidelines by client and state.</p>
Quality Auditing	Coding quality auditing includes automated scoring of level assignment, CPT, and ICD-9 coding, as well as streamlined correction of entries prior to billing.
Tools for Productivity	EDITS+ is designed with built-in tools to increase coding productivity, resulting in more claims being settled.
Drop-Down Menus	Provide a quicker, more accurate method of selection than typing an entry.
One-Click Code Linking	Quickly link the ICD9 diagnosis code to the CPT code with one right-click of the mouse.
Quick Picks	Easily accessible lists of frequently used selections, identifiable by a lightning bolt, help you to quickly enter data. Quick Pick selections can be customized by your system administrator.
Lookups	Code and Word Lookups allow you to search the selection lists, shortening the list and making your search process quicker.
Tools for Analysis	EDITS+ is designed with built-in analysis tools, supporting physician to practice benchmarking, utilization studies, productivity reporting and more.

FEATURES	BENEFITS
Documentation Differences	When the patient record is incomplete, use the DocDiff placeholder to record the uncodable procedure. DocDiff allows reporting about what could have been charged, if records had been complete, helping to track lost revenue.
Reports	<p>Clinical Reports – reports about various clinical issues. Provides benchmarks within a practice.</p> <p>On-Demand Reports – partially customizable reports about various coding and clinical issues.</p> <p>Operational Reports – reports to help manage coding.</p> <p>Report Writer – create and save your own custom reports with the dedicated user interface.</p>
Visit Process Menu	EDITS+ Visit process menu provides access to the coding windows.
LogView	Captures and assures 100% of visits are coded and accounted for, to reduce the loss of revenue.
Locate Visit	Quickly locate an individual record by patient name, financial number, medical record number, or EDITS+ visit number, for a summary report or individual record entry.
Sort	Thirteen ways to sort the visit log enables each user to adapt the log information to their work process without interfering with other users' work flow.
Statuses to view	Assign resources to locate charts that have been pended, before they get too old. View records assigned as uncodable for accuracy and potential lost charges. Manage work flow by viewing the number of records needing to be coded. View coded records to assess accuracy and productivity.
Work Queues	Increase chart turnaround and accuracy by assigning work queues. Match the qualifications of staff to the function in which they excel.
Professional and Facility Coding	EDITS+ visit process windows are designed to provide all the tools you need for professional and facility coding.
Add CPT / HCPCS	Select the E&M level with a single mouse-click. Use Lookups to select a CPT code, by entering a partial code or a description. Use a Quick Pick list to select common procedures.
Charge Packs	Easily accessible lists of frequently used selections, identifiable by a lightning bolt, help you to quickly enter data. Quick Pick selections can be customized by your system administrator.
E&M Wizard	Accurately determine the E& M level based on government, non-government, or facility-specific guidelines. An excellent resource for new coders, or for implementing new coding guidelines, Wizards are easily customized in system setup.
Documentation Feedback	Immediately enter information about documentation problems that caused a procedure to be skipped or coded at a lower level than the problem warranted, providing valuable feedback to the physician or facility.

FEATURES

BENEFITS

CPT Provider

Assign different providers to the same visit when a patient requires multiple providers or procedures.

Data Capture

Time stamps, vital signs, mode of arrival, patient status, discharge info, and disposition can be easily captured on one screen, providing valuable information for utilization and through-put reporting.

Ancillary

Emergency Department utilization of drugs, tests, supplies and nursing services are captured for reporting and analysis.

Navigational Aides

Keyboard shortcuts and tabbing support hands-on keying, or you can utilize standard mouse-click functionality to work in EDITS+. Coders individual preferences can be accommodated.

Essential Menu Bar Functions

EDITS+ menu bar gives you tools and references for coding related work.

Summary report

Ability to view, print and/or export individual patients visit report for complete, immediate information and charges related to the visit.

Hours entry

Each providers/coders work schedule can quickly be entered and/or altered for reporting and staffing purposes.

Help File

Information on how to use EDITS+ and site-specific information are readily available on screen, an alternative to storing and retrieving paper manuals.

Flexible Data Import / Export

EDITS+ interface capabilities include acceptance of hospital demographic files in flat-file custom format, HL7 format, or HL7 transactions, as well as creation and export of billing data in the same manner.

Scalable Architecture

EDITS+ N-tier architecture facilitates custom installation options. Options range from installation on a single desk top to the creation of a distributed client-server environment.

HIPAA Compliance

EDITS+ includes a full featured permissions system. Additionally, visit access is captured in audit logging. Audit information is readily accessible via a user interface.
